

## AJR Oil Log

AJR Filtration Size 2 Oil Logs are made of 100% polypropylene fiber for maximum oil absorbing capacity. Oil Logs contain over a half pound of shredded POMF fiberfill, packed in a spun bond polypropylene jacket. This eco-friendly construction can easily absorb 5 times its weight in oil. The shredded fibers act like a magnet attracting the oil to the log, absorbing the maximum capacity of oil while remaining the size which easily fits inside a Size #2 filter bag.

Extend the life of your standard filter bags by adding an oil log to remove trace oil.
